

KE YONGQING

Target Role: Commercial Cryptography Product Delivery / After-sales Support / IT Operations Engineer

Phone: +86 158-9209-3800 | Email: 1552720404@qq.com | Preferred City: Xiamen | Experience: 4 Years | Status: Resigned, Available Immediately

Personal Homepage: keyongqing.tech

CORE STRENGTHS

- **4 years** of commercial cryptography product delivery and after-sales experience, serving **25+ banks** and **15+ government / enterprise clients**; **100% acceptance rate** on all implemented projects.
- Proficient in deployment, upgrades and Xinchuang (domestic IT) adaptation of **14+ categories** of commercial cryptography products: signature/verification, SSL gateways, electronic seals, timestamp, dynamic authentication, certificate authentication, HSMS/cryptographic machines, cryptographic service platforms and application delivery.
- Led delivery of large-scale programs: a real-estate platform integrated with **16+ banks**, a dual-datacenter full-stack cryptography rollout (**14 device types**) for a municipal public-security bureau, and a **38-node** cloud-HSM rollout for the State Taxation Administration (Fujian region).
- Production incident handling & O&M: resolved SSL handshake failures, signature service anomalies, memory leaks, certificate loss and device outages — including a highest-level service outage — with full closure; **4-year dedicated maintenance** for Haixia Bank.
- Documentation & compliance: produced **200+** implementation, acceptance and O&M documents; repeatedly supported cryptographic assessment and classified-protection testing and completed remediation.

WORK EXPERIENCE

Beijing Infosec Technologies Co., Ltd. (Stock-listed) | Product Delivery Engineer / After-sales Engineer 2022.07 – 2026.07

A leading listed vendor in commercial cryptography and information security, serving government, finance and other industries.

- **Project delivery:** led on-site implementation and interface integration for multi-bank large programs (real-estate, medical-bank, social-security-bank, medical-insurance wallet), and concurrently delivered multiple product lines for rural-credit clients — covering solution drafting, device racking, integration testing, acceptance and training end-to-end.
- **After-sales support:** owned annual maintenance and incident response for core banking signature/verification systems, supporting stable operation of second-generation payment, digital currency, medical insurance, social security and taxation; participated in night cutovers, local-city switch drills and year-end settlement on-call.
- **O&M system:** built quarterly / semi-annual / annual inspection and maintenance routines for 10+ clients, producing inspection reports and configuration baselines; completed SSL gateway major-version upgrades, configuration migration and batch vulnerability patching.

PROJECT EXPERIENCE

Real-Estate Mortgage Direct-Connection Platform 2023 – 2026

Role: Core Implementation Engineer

- Deployed signature/verification servers, a bank-enterprise direct-connection encryption gateway and a CA certificate-authentication system as a full-stack cryptography platform; designed the bidirectional signature/encryption interface logic between banks and the central platform.
- Completed device racking, certificate import, gateway configuration and integration testing for 16+ banks; continuously ran semi-annual / annual centralized inspections.
- **Highlights:** national-crypto signature/verification and digital envelopes, RA/OCSP certificate hierarchy, cross-bank interface integration.

Fujian Rural Credit – Multi-product O&M & Medical-Bank Direct Connection 2024 – 2026

Role: Lead After-sales Engineer (parallel multi-product support)

- O&M and troubleshooting for the cryptographic service platform, VPN gateways and other products; drove root-cause fixes for memory leaks, key-synchronization issues and lost signature certificates, and pushed patch releases.

- Completed signature / verification / encryption / decryption integration for medical-bank direct connection with 7+ banks; in 2025, batch-implemented and went-live the medical-insurance wallet for 5 banks.
- **Highlights:** parallel multi-product support, medical-bank direct connection, batch medical-insurance-wallet rollout.

Haixia Bank Data-Center Security Device Integration 2023 – 2026

Role: Implementation Engineer / Maintenance Lead

- 7 devices across two data centers; independently authored the implementation plan, construction procedure and test plan; phased rollout delivered smoothly.
- 4 consecutive years of maintenance, assuring critical workloads such as digital currency and year-end settlement; built emergency-response plans and a maintenance-manual system.
- **Highlights:** complete documentation set, long-term maintenance, critical-business assurance.

Municipal Public-Security Bureau – Full-Stack Cryptographic Device Delivery 2026

Role: Implementation Lead

- Deployed 14 types of full cryptographic devices across dual datacenters (VPN gateways, server HSMs, signature/verification, timestamp, cryptographic service platform + cloud-HSM, application-delivery gateways); implemented three-authority separation and UKey binding.
- Closed the compliance loop: factory acceptance for 7 device types, 6 Ministry of Public Security security tests, 3 cryptographic-assessment remediations; completed initial project acceptance in Q2 2026.
- **Highlights:** coordinated delivery of a full-stack cryptographic estate, complete compliance evidence chain.

Personal Online Resume Website (Side Project) 2026

Role: Independent Developer

- Independently designed and built a personal resume website with AI-Agent + vibe coding; hosted on GitHub Pages via Git; bought an Alibaba Cloud domain, configured DNS and HTTPS; launched at keyongqing.tech.
- **Highlights:** AI-assisted development efficiency, Git / GitHub Pages deployment, DNS resolution and HTTPS configuration.

SKILLS

- **Proficient:** deployment, upgrades and Xinchuang adaptation of 14+ categories of commercial cryptography products; full-lifecycle project delivery (solution → implementation → integration → acceptance → training); troubleshooting methodology and SSL-handshake packet-capture analysis.
- **Familiar:** inspection & maintenance routines, production-change on-call, night cutovers, cryptographic-assessment / classified-protection support, customer training and documentation delivery (operation manuals / emergency cards / incident reports), requirement management (ticket closure), cross-vendor coordination (UKey vendors / R&D support).
- **Working knowledge:** basic Linux O&M and hardening, keepalived / HA high availability, basic Java / Python development and secondary interface development.

EDUCATION

Putian University · B.Eng. in Communication Engineering (Full-time Bachelor's) 2018.09 – 2022.06

INTERNSHIP

Beijing Topsec Network Security Technology Co., Ltd. – Fuzhou Branch | After-sales Engineer (Intern) 2022.03 – 2022.06

- Participated in security-device rollouts at universities, configuring egress firewalls, internet-behavior management and WAF; assisted with acceptance.
